COMPRESSOR OILS 10, 20, & 30 PD

Compressor Oils 10, 20, & 30 PD are premium quality detergent type oils specially compounded for compressor applications. They are made from high quality paraffinic base stocks with detergent, anti-wear, anti-corrosion, antioxidant and anti-foam additives. They are very effective in applications, which require high temperature stability.

In many adverse applications the PD compressor oils completely out perform conventional R & O oils and automatic transmission fluid. Localized conditions such as higher than normal temperatures at the air intake or high level of air borne contaminants may require fluids of this type to assure long life and low maintenance costs. Years of experience show that these oils give extended service life. Be sure to follow compressor manufacturers recommendations for the proper viscosity and oil quality required for a particular compressor.
