ENDURA AIR TOOL OILS

Interlube's Endura Air Tool Oils are designed to maintain the original optimum performance of your air tools at all times. They do this through a unique combination of special base oils and additive treatments which virtually eliminate the normal rusting, gumming, and wear problems. They provide the following:

DETERGENCY & CLEANING ACTION - Keeps the tools clean and the air passages open to boost operating efficiency and provide trouble free operation. Eliminates varnish and sludge buildups and prevents sticking.

EMULSIFICATION OF MOISTURE IN COMPRESSED AIR - Eliminates the harmful effects of entrained moisture by absorbing it and forming a stable lubricating emulsion and constantly removing it from the system.

ANTI-WEAR AGENT - Significantly reduces wear, providing longer air tool life.

SUPERIOR ADHERENCE - Clings to the metal surfaces tenaciously, preventing rapid wash off. Gives improved lubricity and reduced oil consumption.

RUST & CORROSION INHIBITION - Provides extra protection to keep passages open and reduce wear.

OXIDATION RESISTANCE - Prevents varnish and sludge formation.

YOU SAVE FROM THESE ADVANTAGES

- * Reduced maintenance costs
- * Longer equipment life
- * Lower oil consumption
- * Increased equipment utilization (less down time)
- * Increased productivity due to optimum air tool equipment performance

Endura Air Tool Oils are available in several viscosity grades to meet your specific needs.
