RED HI LO TEMP MULTI-PURPOSE GREASE

Red Hi Lo represents a great advancement in high temperature grease technology. This multi-purpose grease provides exceptional service under a wide range of temperatures, pressures, moisture levels and adverse operating conditions. Red Hi Lo will pump at low ambient temperatures and provide excellent lubrication at high bearing temperatures of up to **550°F and above**. The red color enables the operators to see at a glance where and when a part needs attention.

Red Hi Lo is manufactured from the finest oils, thickeners, stabilizers, inhibitors and other additives and is produced with modern manufacturing techniques and close attention to quality control. This provides the user with a superior grease of outstanding reliability, which can result in substantially reduced maintenance costs, downtime and lubrication frequency.

Red Hi Lo can be used to lubricate: ball bearings, conveyor bearings, wheel bearings, roller bearings and plain bearings in areas of high or ambient temperatures on any type of industrial equipment. Slides and glides on various equipment can also be lubricated. This grease can be applied by pressure systems, hand grease guns, cups or just by hand. Because of the tenacity and non-melt features of this grease, vertical, horizontal or inclined areas do not present any problems or require special procedures.

ADVANTAGES

High temperature performance – Non-melting grease

Pumpability at high and low temperatures

High Visibility – Red color

Excellent Adhesion – No run off

Excellent Cohesion – No spatter

Thermal Stability – No breakdown

Oxidation Resistance – No thickening

Excellent Utility – Many Applications

Reliability – Thoroughly tested

Anti-wear Characteristics
